Artoi President Massimo Bonucci

INTEGRATIVE ONCOLOGY: A SKYLINE OF THIRD MILLENNIUM

One resource for health and tailored care of patient

“ Over ten years after the birth of ARTOI, the initial goal of mitigating the side effects of conventional cancer therapies, thus improving the quality of life of the cancer patient, has been widely achieved. Besides, for patients treated with integrative therapies, there is evidence of increased life expectancy, especially when integrative therapies are maintained over time and are associated with an adequate lifestyle.

This has allowed us to change the paradigm of oncological pathology itself: from 'incurable' to 'sustainable'. In a vision of the patient's centrality, the X ARTOI Congress will allow sharing the clinical experiences of experts in integrative cancer therapies from different geographical areas, to find a shared therapeutic synthesis (Consensus Conference on Integrative Treatments). The event will also promote national and international collaborations for interdisciplinary, clinical and pre-clinical research, and will, therefore, be aimed at doctors, researchers, students, and patients who are interested in the innovative aspects of integrative cancer therapies. ”
